

Get Rid of Sun Damage, Brown Spots, Loose Skin, Acne, and Blood Vessels

Rejuvenate Medical Spa has the latest technology and photofacial device to treat many of your concerns. We acquired a state of the art machine to treat discolouration, loose skin, pigmentation, broken blood vessels and acne on the face. Using BroadBand Light (BBL), this is an innovative technology that sets new standards for skin conditions associated with aging, active life-styles and sun damage. BBL energy allows your clinician to precisely treat age and sun spots, small facial veins, and many other skin conditions

How does BBL work? Light energy delivered by the BBL will gently heat the upper layers of your skin. The heat absorbed by the targeted areas will stimulate your skin cells to regenerate new collagen. This process will restore your skin to its natural beauty, blending its natural colors and making it smoother, vibrant and younger looking. The photothermal energy will eliminate fine vessels that cause redness and reduce unwanted melanin that produces brown age spots

Using BBL, we can now treat pigmented lesions (e.g., freckles, age spots); vascular lesions (e.g., small blood vessels); acne; skin laxity or looseness; and uneven skin texture. While almost any part of the body can be treated, the most common areas are those most exposed to the damaging effects of sunlight, such as the face, neck, back of the hands, chest and shoulders. As seen on the popular 'The Doctors' TV show, our laser is also equipped with Skin Tyte to help dramatically tighten loose skin around the neck and jowls without surgery.

The number of treatments needed will vary by client and at Rejuvenate Medical Spa we will personalize a treatment plan based on the level of improvement you desire. At times, we will also combine your treatment with other popular aesthetic procedures to further personalize your treatment, such as fillers and botox.

This is a great procedure for the busy woman who wants a dramatic change and improvement to skin texture, colour, and tone with little to no downtime. Your treated skin will feel smoother, fine lines and pores will be less noticeable, and sunspots or uneven pigmentation will fade. Results depend on your condition, the number of treatments, and the area treated. In most cases, you are able to return to work, apply makeup, and resume most of your activities the following day.
